EDUCATION

University of California, San Diego | B.S. Data Science — Graduated Mar 2025

- Practice of Data Science, Probabilistic Modeling & Machine Learning, Statistical Methods, Data Management, Data Analysis & Inference

Certification: Google Data Analytics (*Coursera*)

TECHNICAL SKILLS

Languages: *Python, SQL, Java, JavaScript, HTML, R*

Frameworks / Libraries: *Pandas, NumPy, PyTorch, HuggingFace, TensorFlow, OSMnx, Cenpy, GeoPandas, OpenCV, Scikit-Learn*

Tools: *Amazon Web Services (Lambda, DynamoDB, QuickSight), Github, Excel, Tableau, Power BI, Docker, ArcGIS, D3.js, Svelte*

WORK EXPERIENCE

Data Science Fellow | San Diego Gas & Electric | *San Diego, CA* — Sep 2024 - Mar 2025

- Conducted time series analysis and geospatial analysis using **Python** to evaluate EV charger density and growth across 1100+ chargers in San Diego, identifying underserved areas using **Pandas**, **Scikit-Learn**, **GeoPandas**, and **Folium.**
- Projected a 57% increase in EV adoption in 2025 through regression modeling on DMV vehicle registration data using **Python** and **SQL**.
- Applied statistical modeling with **Statsmodels** to evaluate the correlation between EV ownership and charger availability in San Diego.
- Authored a findings report on EV adoption trends and charger optimization opportunities and presented to the Director of Data Science.

Data Science Intern | Mercury Alert AI | *San Diego, CA* — Jun 2023 - Oct 2023

- Independently drove the development of an internal quality assurance dashboard using **Python**, designed to monitor over 50+ devices and provide real-time reports on temperature, empty frames, and device capture errors.
- Performed anomaly detection using **AWS QuickSight** to identify and analyze time-stamped image captures with low confidence scores.
- Reviewed and updated the **Jupyter Notebook** data management system by relabeling mispredictions and annotating low confidence score images identified through time-stamped analysis, improving the retraining efficiency of AWS Lambda by 30%.

Data Analyst Intern | Redrock Biometrics | *San Francisco, CA* — Jun 2022 - Sep 2022

- Implemented a custom image processing pipeline using **OpenCV** and **NumPy** Python libraries to efficiently load, preprocess, and analyze 1,200 palm print images, enabling accurate edge detection and feature extraction for biometric analysis.
- Optimized palm print recognition accuracy by identifying the ideal Top-N predictions, reducing the False Rejection Rate (FRR) by 63.6%.
- Showcased results of analysis using **Python**, **SQL**, and **Tableau** to influence software engineers' decisions on the ideal Top-N prediction.

PROJECTS AND LEADERSHIP EXPERIENCE

EV Charger Fault Detection & Reporting Application | SDG&E Capstone Project (website link)

- Curated a two-step **Python** pipeline using NVIDIA's **mit-b3** for semantic segmentation of EV charger components, followed by a **binary classifier** to determine component health.
- Developed a mobile app to enable EV owners to report charger faults, streamlining repair workflows and improving charger reliability.
- Designed a **Figma** demo for users to report charger faults, integrating guided photo capture, fault category selection, and an input text box.
- Presented the product to 200+ SDG&E employees, including principle engineers, project managers, and directors, showcasing the pipeline's impact on charger fault detection and maintenance optimization.

Recipes Protein Analysis and Predictor | Data Science / Machine Learning Project (github link)

- Performed **exploratory data analysis**, feature engineering, model training, and hyperparameter tuning to improve the original model.
- Built a machine-learning model to predict protein content in 234,429 different recipes from Food.com using **Scikit-Learn**, **Random Forest Regressor**, and **GridSearchCV**.
- Conducted fairness analysis using hypothesis and permutation tests, revealing RMSE disparities between meat and non-meat recipes.

Data Science Student Society | VP Internal (https://www.ds3ucsd.com/)

- Led a cross-functional group of over 300 data science undergraduates, orchestrating weekly strategy sessions that streamlined project execution and enhanced collaboration across teams, driving the successful completion of key initiatives.
- Initiated a mentorship program, pairing 30+ junior members with senior mentors, boosting member engagement by 50%.
