PROFESSIONAL SUMMARY

Forward deployed engineer with production experience designing and delivering AI agent integrations, low-code automation workflows, and cross-functional technical deployments for SMB clients. Proficient in **Python, JavaScript, REST APIs, n8n**, and **MCP** — with hands-on experience configuring LLM agents, defining prompt logic and guardrails, and driving adoption across multi-country operations. Managed outbound sales teams running on Aircall's platform — power dialing, dispositions, and call workflows across 50+ agents — bringing direct product context to every customer-facing deployment. Proven ability to translate ambiguous business requirements into scoped technical solutions and close deals independently.

TECHNICAL SKILLS

Integration & Automation: n8n, Dify, REST APIs, Webhooks, JSON, GraphQL, MCP (Model Context Protocol), FastAPI, Zapier-equivalent orchestration, CRM API integrations (Pipedrive, HubSpot-pattern)

AI & Agent Configuration: LangChain, LangGraph, Prompt Engineering, LLM Agent Design, Intent Definition, Guardrails, Evaluation Frameworks, RAG Pipelines, HuggingFace

Programming: Python, JavaScript, SQL, Pandas, NumPy

Cloud & Infrastructure: AWS (Lambda, QuickSight), GCP, Docker, Apache Airflow, PostgreSQL, CI/CD, GitHub

ML & Modeling: PyTorch, Scikit-Learn, XGBoost, LightGBM, Anomaly Detection, Feature Engineering

BI & Reporting: Tableau, Power BI, AWS QuickSight

Dev Tools: Claude Code, Cursor, GitHub Copilot, Jira, Slack integrations

PROFESSIONAL EXPERIENCE

AI Solutions Engineer & Technical Project Manager

Jul 2025 – Present

Helpport AI | San Diego, CA

- Led end-to-end delivery of AI agent integrations for 10+ SMB clients across mortgage, solar, insurance, and real estate — owned full deployment lifecycle from customer discovery and solution architecture through build, go-live, and adoption measurement.
- Designed and deployed AI agent workflows using **LangChain, Dify, n8n**, and **REST APIs** — configured intent logic, prompt engineering, guardrails, and performance evaluation frameworks for LLM agents operating in live call center environments.
- Managed outbound sales operations on Aircall's platform across 50+ agents in 3 countries — owned power dialing workflows, call dispositions, QA feedback loops, and agent performance tracking across mortgage, solar, insurance, and real estate verticals.
- Built reusable integration frameworks and deployment playbooks adopted across 4 regional teams — reduced manual data entry to zero via a production **MCP**-pattern CRM automation layer connecting LLM agents to external systems via structured **REST API** tool-calling.
- Stepped into B2B sales after director departure — led customer discovery, scoped the solution architecture, closed the deal solo, and doubled client revenue within 3 months. Managed cross-functional stakeholder alignment throughout.
- Trained team leads and regional managers on AI workflow tools — ran enablement sessions, documented best practices, and upskilled 4 team leads to independently troubleshoot and manage deployed systems.

Data Science Intern

Sep 2024 – Mar 2025

San Diego Gas & Electric | San Diego, CA

- Shipped Flare: an end-to-end AI-powered inspection pipeline replacing manual workflows for 400+ field employees — fine-tuned an NVIDIA mit-b3 transformer via **HuggingFace**, containerized with **Docker**, deployed to **GCP** via **FastAPI**. Managed stakeholder alignment across engineering and operations throughout delivery.
- Built automated **Python/SQL** data pipelines with **Airflow** orchestration across 1,100+ EV charger deployments — partnered with engineering and business stakeholders to translate requirements into reliable analytical infrastructure.
- Delivered **Tableau** self-serve dashboards and communicated ML model outputs to executive and technical audiences — translated complex findings into clear recommendations that informed infrastructure roadmap decisions.

Data Science Intern

Jun 2023 – Oct 2023

Mercury Alert AI | San Diego, CA

- Built and deployed a production **Python** anomaly detection pipeline via **AWS Lambda** — automated real-time data ingestion and alerting across 50+ devices, reducing manual error checks by 40% and improving system reliability by 30%.

Data Analyst Intern

Jun 2022 – Sep 2022

Redrock Biometrics | San Francisco, CA

- Built a **Python/OpenCV/NumPy** pipeline to preprocess 1,200 biometric samples — applied feature engineering and classifier evaluation to reduce False Negative Rate by 63.6%, and communicated findings to engineering stakeholders with actionable recommendations.

PROJECT EXPERIENCE

CRM Lead Entry AI Agent — Production Integration, SMB Deployed

2026

- Built a production **LangChain** agent with LLM function calling for entity extraction from unstructured call transcripts — full integration stack with **Python** processing, field-level validation, and CRM write via **REST API**. Deployed on Netlify; in daily use across 4 regional teams. Tracked accuracy metrics and iterated on prompt logic across successive production versions.

EV Charger Fault Detection (Flare) — End-to-End AI Deployment

2026

- Designed and deployed a two-stage **PyTorch** inference pipeline (NVIDIA mit-b3 transformer + binary classifier via **HuggingFace**) containerized with **Docker** and deployed on **GCP** via **FastAPI** — replaced manual inspection workflows for 400+ field employees end-to-end.

Financial News Sentiment Pipeline — Automated Workflow & Reporting

2025

- Designed an end-to-end automation pipeline using **Apache Airflow**, **Docker**, **PostgreSQL**, and **FinBERT/PyTorch** for NLP inference — built a **Tableau** self-serve dashboard with end-to-end data quality validation and anomaly alerting.

EDUCATION

University of California, San Diego

B.S. in Data Science

Probabilistic Modeling & Machine Learning, Statistical Methods, Scalable Machine Learning, Data Engineering, Relational Databases, Recommender Systems

Certification: Google Data Analytics (Coursera) | Work Authorization: U.S. Citizen
